

PRP BUSINESS IDEA

Project Description:

CarMeet is a web-based platform that connects car enthusiasts in a social, event-driven environment. The platform allows users to create and find local car meetups, upload and showcase vehicles, interact in a social feed, and build their community around a shared passion for cars.

The system will include secure user accounts, event management, interactive feeds, and map-based event discovery accessible from any modern browser.

Project Objectives:

- Provide a central hub for car enthusiasts to interact and organize meetups
- Allow users to create and manage their own car profiles and events
- Enable social engagement through photo sharing, likes, and comments
- Build a responsive and secure web app using best development practices
- Integrate location-based features using Google Maps API

Core Features:

Module	Description
User Authentication	Secure login/registration using Spring Security + JWT
Car Profile	Users add details/photos of their personal cars
Meetup Management	Create, browse, join, or delete car events based on city or location
Community Feed	Share car photos, post updates, like/comment on posts
Map View	Display events on an interactive Google Map
Notifications	Notify users of upcoming meets or new interactions
? Admin Panel	Manage user reports and inappropriate content

Technology Stack:

Layer	Technology
-------	------------

Frontend	HTML5, CSS3, JavaScript (Vanilla or React.js)
Backend	Java 17, Spring Boot 3
Security	Spring Security with JWT Authentication
Database	PostgreSQL with JPA/Hibernate ORM
External APIs	Google Maps API for location features
Version Control	Git + GitHub
Deployment	Frontend: Netlify or GitHub Pages Backend: Render or Railway Database: Hosted PostgreSQL on Railway or ElephantSQL

Project Deliverables:

- Fully functional, mobile-friendly web application
- GitHub repository with full source code and documentation
- UML Class Diagram & ERD (Entity Relationship Diagram)
- WIL technical report and presentation slides
- Deployed website link (hosted frontend & backend)
